

Mathematical Thinking and Quantitative Reasoning

Designed for the non-traditional Liberal Arts course, *Mathematical Thinking and Quantitative Reasoning* focuses on practical topics that students need to learn in order to be better quantitative thinkers and decision-makers. The author teams approach emphasizes collaborative learning and critical thinking while presenting problem solving in purposeful and meaningful contexts. While this text is more concise than the author teams *Mathematical Excursions* (2007), it contains many of the same features and learning techniques, such as the proven Aufmann Interactive Method. An extensive technology package provides instructors and students with a comprehensive set of support tools.
