

Medical electricity Rontgen rays and radium; with a practical chapter on phototherapy

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1915 Excerpt: ...to the kidney in a number of different diseases it increases not only the water but also the solids of the urine, pathologic or normal, and eventually leads to a healthy activity and seems to be indicated in chronic Blights disease, where it seems likely to afford a means of more permanent relief than the operation of decapsulation. It is especially indicated in cases of high arterial tension when the primary cause lies in the kidneys. It is of the same doubtful value in bacterial diseases of the kidney as of the lung. Diathermy has an excellent effect in colitis, intestinal adhesions, and chronic appendicitis, but will aggravate the latter disease if suppuration is present. This may be excluded by a count of the white bloodcells. Biliary and renal colic are benefited, except, of course, cases requiring operation. Achylia gastrica is benefited, but the opposite condition of hyperacidity is rather a contra-indication, because of the possibility of a latent ulcer which would be aggravated by diathermy. Nervous gastralgia, dyspepsia, and disturbances of motility are benefited. Nagelschmidt distinguishes the cases of exophthalmic goiter due to hyposecretion, and which should be treated by diathermy, from those due to increased secretion and which should be treated by the x-ray. A single test administration of iodid aggravates a case calling for diathermy. Diathermy in Gynecology.--The best results are from a large indifferent external electrode and an active vaginal electrode. Suppurative processes are a contra-indication, but outside of them the current is of the greatest value in adhesions, uterine displacements, old exudates, and ovarian neuralgia. A strong

application to the entire mucous membrane of the uterus is advised in acute or chronic gonorrhoeal end...
